

Inventions of Modern China

By Carley B.

“How do you get around? Don’t you wish there would be an easier way?” In 1921, 44 year-old Gino Tsai, the president of the J.D. Corporation in Chang Hua, Taiwan, invented the Razor Scooter after he updated the original scooter called the Razor Scooter after he updated the original scooter. Gino Tsai had invented the scooter so he didn’t need to walk so much to get around his factory. After five years of working he had finally invented a foot-powered scooter also known as the Razor Scooter.

This is a picture of the Razor Scooter that he invented.

The J.D. Corporation is a manufacturer of high-end aluminum bicycle frames and specialty parts,(parts that can only be used for one thing or place on an object and must be made by that company) used all over the world.

The Razor Scooter is a foldable scooter that can support a 1,100-pound load without bending, and uses wheels with silent bearings,

and a brake on the back worked by stepping on the rear fender.

He got the idea of the Razor Scooter from the old-fashioned scooter but he needed it to be smaller and not take up a lot of space in order to ride around his bicycle Factory.

Razor Scooters have declined in popularity since 2000, but are still available. They have released other inventions that they used from the model of the Razor along with motorized transportation vehicles and toys since the original scooter. Four different inventions that came from the model of the razor scooter were the electric scooter, gas scooter, the foot powered kick scooter, and the popular variations of the traditional Go-kart.
